Every trader you know loses to the same **three enemies**. Fear. Greed. **Sleep**.

I

Emotion taxes the math

Studies show retail traders cut winners 2.3× faster than losers. The edge dies at the trigger finger.

II

Sentiment moves before price

By the time a chart confirms, 1,000 wallets have already rotated. Machines read intent. Humans read news.

III

Markets don't sleep. You do

Alpha isn't extracted in business hours. It's harvested at 03:14 AM Sunday, when conviction divides.

"What if the trader was never the bottleneck — only the human inside it?"

THE BREAKTHROUGH -----

A trading engine that doesn't **flinch**, doesn't **hope**, and won't **sleep**.

Four models, one consensus. LightGBM reads structure. LSTM reads memory. Transformers read attention. An LLM reads the world. **They vote. The capital moves. You sleep.**

```
// SYSTEM SIGNATURE
engine.signal = consensus(
    lgbm(ohlc + microstructure),
    lstm(temporal_memory),
    transformer(cross_asset_attention),
    llm(global_sentiment_parse)
) → regime_switch → execute
```

This is not a pitch deck. This is a **published paper**.

Four signals. One **decision**. Zero hesitation.

L1 LightGBM

STRUCTURE

Gradient-boosted trees over engineered OHLCV + order book microstructure features.
Reads the skeleton of price.

L2 LSTM

MEMORY

Recurrent network for temporal dependency. Recognizes patterns the moment they
begin to rhyme with history.

L3 Transformer

ATTENTION

Multi-head attention across cross-asset signals. Sees the correlation before it
materializes.

L4 LLM Sentiment

INTENT

Claude-Opus parses news, social, and on-chain top-1% wallet flow in real time. Measurable, statistically significant edge.

What happens when the trader is **fully autonomous**?

You need hard boundaries.

PolyEdge introduces three novel safety mechanisms for autonomous AI trading systems.

Bounded Autonomy

Hard deterministic gates. Risk profiles that **cannot be bypassed**. Promotion pipeline with statistical gates. \$10/day LLM budget cap. Experiment isolation.

NON-BYPASSABLE

DETERMINISTIC

StrategyGenome

Chromosomal strategy representation. Five chromosomes: Perception, Cognition, Execution, Risk, Meta. Gaussian mutation + two-point crossover. Composite fitness: Sharpe + win rate + Brier + drawdown.

EVOLUTIONARY

INTERPRETABLE

Dual-Debate

Bull vs Bear agents argue before a Judge. Confidence threshold gates capital deployment. Failed signals fall back to local debate engine. Every verdict recorded in TradeAttempt ledger.

ADVERSARIAL
